Category	Analytics & Reporting
Target market	Indonesia
Product URL	https://untungin-ai.vercel.app/login
Demo account	alimafudfe+demo@gmail.com
Demo password	Provided in the TikTok Shop Partner Center review form

1. App Purpose

Untungin.ai is a seller analytics platform designed to help online sellers discover trending and high-demand products in TikTok Shop, Tokopedia, Shopee, and other marketplaces. The app helps sellers understand what products are popular this week, this month, and during seasonal or national holiday moments. The goal is to support product sourcing, stock planning, sales strategy, and daily seller decision-making.

2. Main Features

The main features include product trend analysis, bestselling product insights, marketplace and category comparison, estimated demand, price range insight, competition level, inventory overview, profit dashboard, cashflow summary, reports, and recommended seller actions. The app is designed for sellers who need practical insights before deciding which products to sell or restock.

3. Login Flow

Reviewers open the product URL and log in using the demo account provided in the review form. After successful login, the reviewer lands on the seller dashboard. The demo environment is prepared so reviewers can access the main dashboard and product trend features without needing a real seller authorization during review.

4. Product Trend Analytics Flow

After login, reviewers can open the Insight AI or Integrasi CSV & API section from the sidebar. The trend page shows trending products and high-demand product opportunities. Reviewers can filter product trend signals by period, including this week, this month, and seasonal or national holiday moments. The page also displays estimated demand, price range, marketplace signal, category signal, competition level, and recommended seller actions.

5. API Scopes Used

The requested TikTok Shop API scopes support analytics and reporting use cases. Relevant scopes include Bestsellers, Global Product Information, Global Category Information, Global Shop Information, and TikTok Shop Analytics. These scopes are used to support product trend discovery, category analysis, marketplace insight, and seller analytics after approval and seller authorization. The app does not request unnecessary data modification permissions such as product delete or product modify for the initial review use case.

6. Data Privacy and Buyer PII

Untungin.ai is designed for analytics and reporting. The app does not request unmasked buyer personally identifiable information for the review use case. Seller data access will only be activated after official app approval and seller authorization. Demo data shown during review is prepared for evaluation purposes.

7. Demo Account for Review

The reviewer can use the product URL and demo account submitted in the TikTok Shop Partner Center form. The demo account opens the seller dashboard and allows the reviewer to inspect the product trend analysis, inventory, profit, cashflow, reports, and recommended seller action features.

8. Step-by-step Product Testing Instructions

- 1 Open <https://untungin-ai.vercel.app/login>.
- 2 Log in using the demo account and password provided in the review form.
- 3 After login, review the seller dashboard.
- 4 Open the sidebar menu Insight AI or Integrasi CSV & API.
- 5 Review the product trend analysis feature.
- 6 Check product trends by period: this week, this month, and seasonal or national holiday moments.
- 7 Review seller analytics such as inventory, profit, cashflow, reports, and recommended seller actions.
- 8 This is a reviewer demo environment. Official TikTok Shop API integration will be activated after app approval and seller authorization.

9. Feature List Summary

- Product trend analysis by week, month, and seasonal/national holiday moments.
- Bestselling product insights and category comparison.
- Estimated demand, price range, and competition level.
- Seller dashboard for inventory, profit, cashflow, and reports.
- Recommended seller actions for sourcing, stock planning, and sales strategy.
- TikTok Shop API integration flow for authorized seller data after approval.
